

How to Apply Vinyl Lettering

1. Clean the application surface, using a cloth or cleaner as needed. Make sure surface is dry before applying lettering.

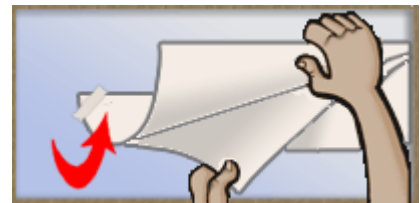

2. Secure the vinyl lettering to the wall with small pieces of tape, so you can check level and measure as needed to ensure the lettering is positioned correctly.

3. Once the position of your lettering is correct, apply a piece of tape across the top of the lettering to use as a hinge, so that placement won't be lost when removing wax paper backing.

4. Using the previously applied tape as a hinge, turn the lettering up and remove the wax paper backing, from the application tape.

5. With the lettering in place, apply pressure with something flat like a credit card or similar object. Work from the center out towards the edges, so that the air is forced out from beneath the vinyl lettering.

6. Remove the paper, and you're done!
